New Jersey American Water to Start Annual Spring Cleaning

Water main flushing begins this week and continues through the fall

VOORHEES, N.J. (March 5, 2018) – This spring and into the summer months, New Jersey American Water will perform its annual cleaning of the water distribution system to help ensure that customers continue to receive high-quality, reliable water service. Beginning this week, New Jersey American Water will begin annual maintenance to flush out harmless mineral deposits that may have built up in the pipe’s inner walls.

Flushing the water mains involves loosening sediment by pumping a high velocity of water into the pipes then out through open fire hydrants. The service areas that will be impacted and dates when flushing begins are posted at www.newjerseyamwater.com, under Alerts.

While water mains are being cleaned, it is common for customers to notice short periods of low water pressure or discolored water. If customers experience temporary water discoloration, New Jersey American Water recommends running the water until it is clear. The following steps are also encouraged:

- Draw water for cooking prior to the flushing period
- Store a large bottle of water in the refrigerator for drinking
- Check for discolored water before using the washing machine or dishwasher
- If water pressure or water volume seems low after flushing has been completed, check faucet screens for trapped particles.

In addition to [viewing the schedule](#) on the company’s website, customers also have the option to be updated on the local flushing schedule via phone call, text or email by enrolling in New Jersey American Water’s CodeRED customer notification system at www.amwater.com/myaccount.

New Jersey American Water, a subsidiary of American Water (NYSE: AWK), is the largest investor-owned water utility in the state, providing high-quality and reliable water and/or wastewater services to approximately 2.7 million people.
